

# Performance evaluation of irrigation systems in Western Oklahoma

Ninth International Conference on Irrigation and Drainage  
October 11-14, 2016

**Blessing Masasi; Saleh Taghvaeian; Scott Frazier**

Biosystems and Agricultural Engineering Department,

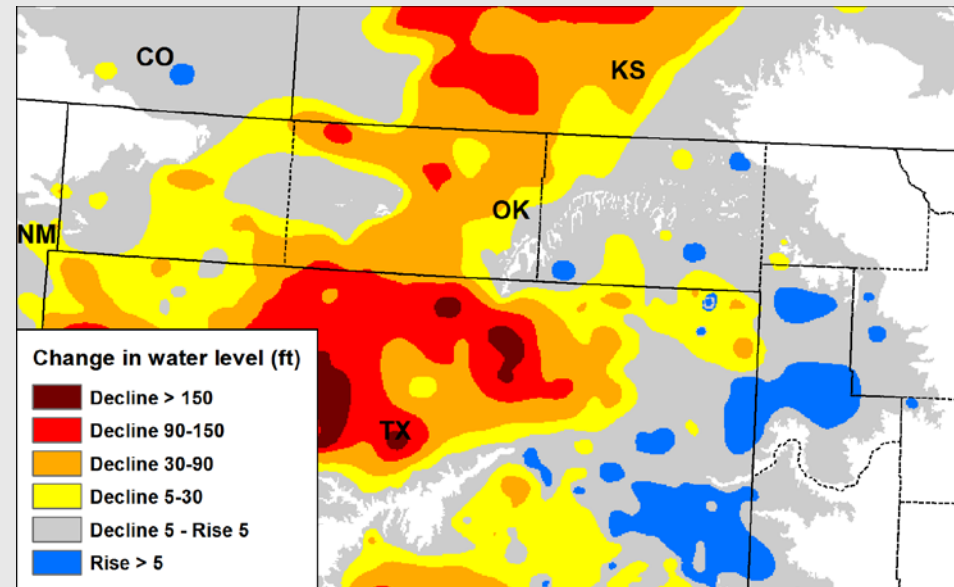

Oklahoma State University

DIVISION OF  
Agricultural Sciences  
& Natural Resources

# IRRIGATION IN OKLAHOMA

- ❑ Crop irrigation constitutes 41% of total water use in OK (*OWRB*)
- ❑ 95% sprinkler irrigation systems; 3% gravity systems & 2% drip systems (*Taghvaeian, 2015*)
- ❑ 92% irrigation water is from groundwater & 8% surface sources (*FRIS, 2013*)

# WHY PERFORMANCE EVALUATION?

- ❑ Decline in average well pumping capacity:
  - 505 GPM in 2008 to 408 GPM 2013 (*FRIS, 2013*)
  
- ❑ High cost of pumping
  - \$22 Million spent in irrigation energy use in 2013 (*FRIS, 2013*)

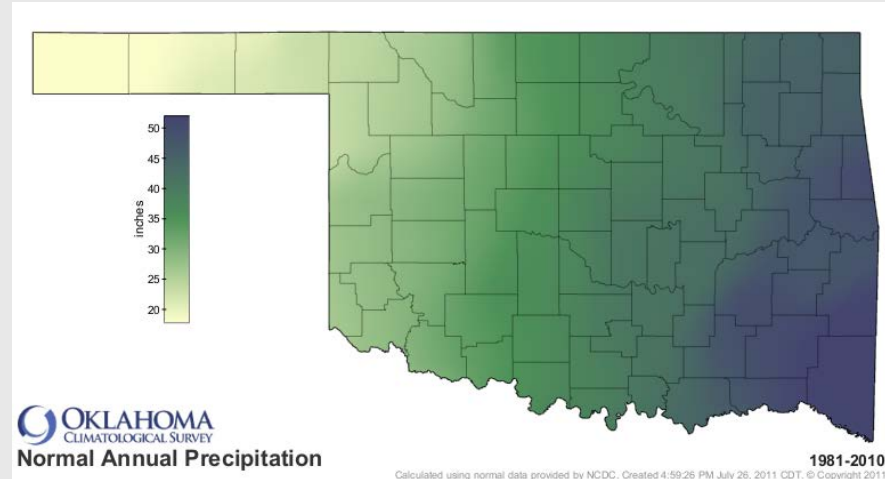

# STUDY AREA

## TEST LOCATIONS

## RAINFALL PATTERN

*(Oklahoma Climatological Survey)*

DIVISION OF  
Agricultural Sciences  
& Natural Resources

# PROJECT OBJECTIVES

- To estimate water application uniformity and efficiency
- To estimate the Overall Pumping Efficiency (OPE)
- To work with producers to improve the efficiencies
- To carry out a Life Cycle Assessment (LCA)

# WATER AUDIT

## CATCH CAN TEST

Estimation of water application uniformity ( $CU_{HH}$  &  $DU_{lq}$ )

$$CU_{HH} = 100\% * \left[ 1 - \frac{\frac{1}{n} \sum_{i=1}^n S_i |V_i - \bar{V}_p|}{\sum_{i=1}^n V_i S_i} \right]$$

*(ANSI/ASAE S436.1)*

$$DU_{lq} = 100\% * \frac{\bar{V}_{lq}}{\bar{V}}$$

*(Merriam and Keller, 1978)*

# WATER AUDIT

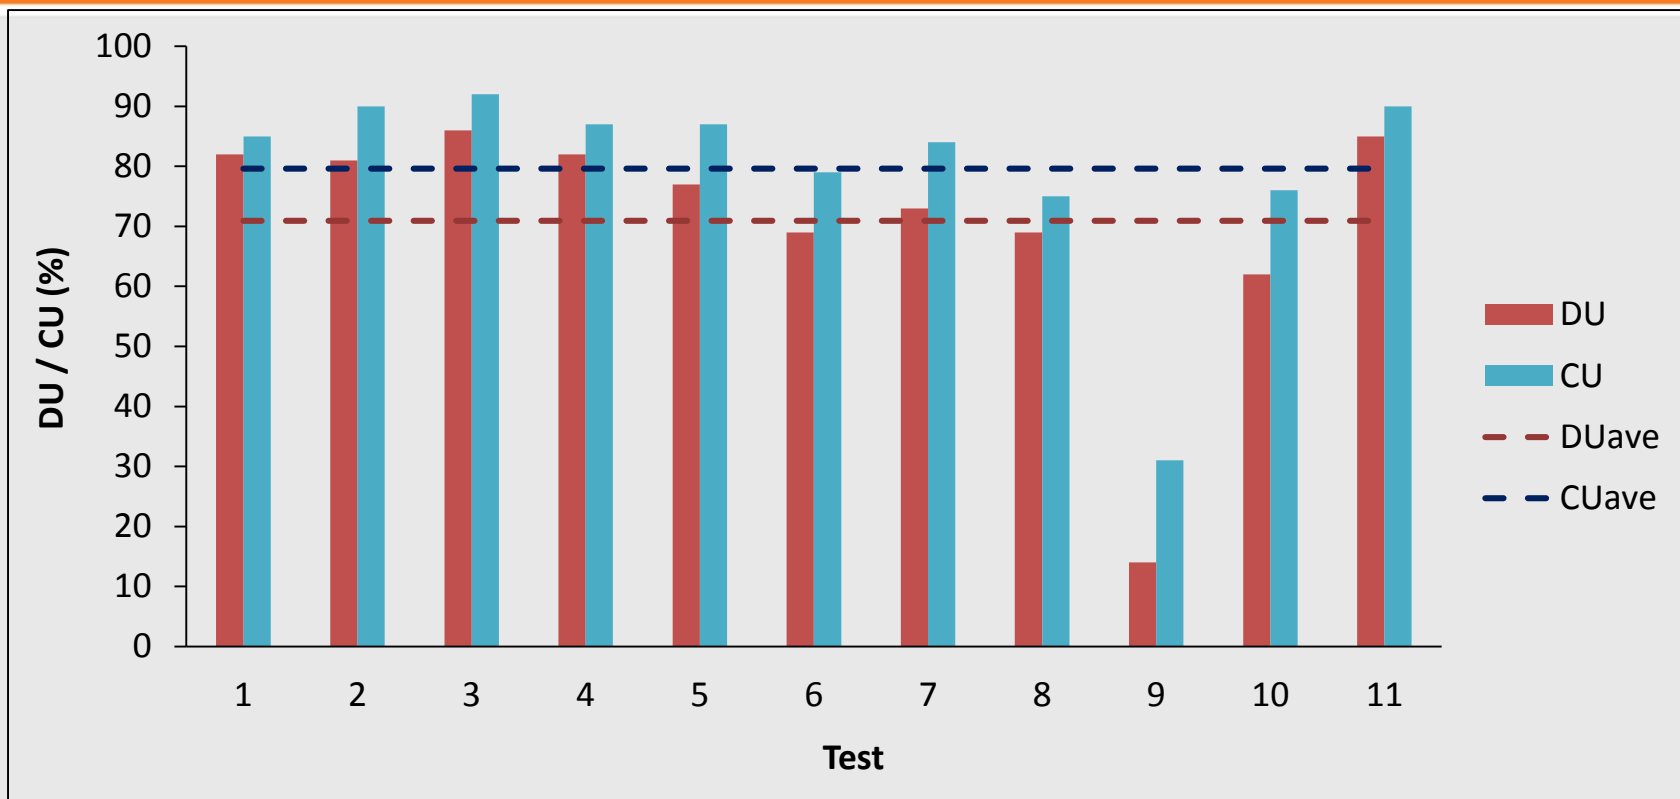

## Estimation of Water Application Efficiency (WAE)

$$\text{WAE} = \frac{\text{water delivered to the field} * 100\%}{\text{water supplied by the irrigation source}} \quad (\text{Rogers et al., 1997})$$

# WATER APPLICATION UNIFORMITY

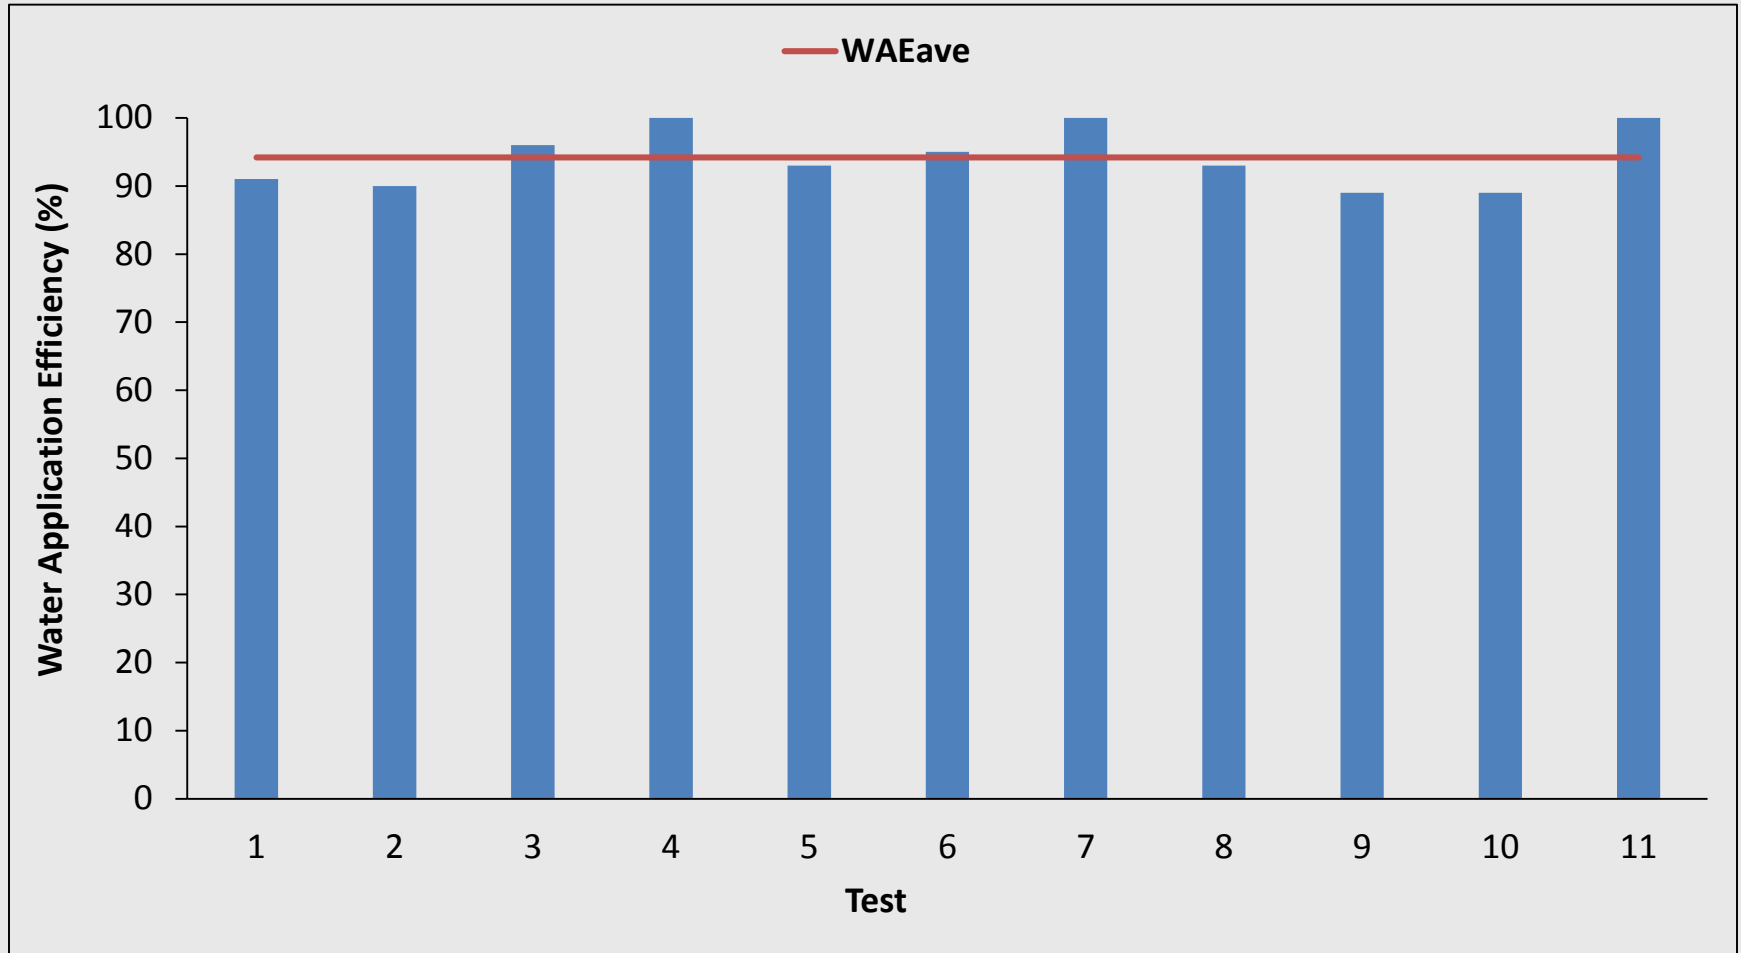

| DU Range | Classification      | # of systems |
|----------|---------------------|--------------|
| >=85%    | Excellent           | 2            |
| 80%      | Very Good           | 3            |
| 75%      | Good                | 1            |
| 70%      | Fair                | 3            |
| <65%     | Poor & unacceptable | 2            |

| CU Range | Classification | # of systems |
|----------|----------------|--------------|
| 90%-95%  | Excellent      | 3            |
| 85%-90%  | Good           | 3            |
| 80%-85%  | Fair           | 1            |
| <80%     | Poor           | 4            |

# WATER APPLICATION EFFICIENCY (WAE)

# POOR PERFORMANCE

|                    |      |
|--------------------|------|
| Average catch (in) | 0.24 |
| DU                 | 14%  |

|     |     |
|-----|-----|
| CU  | 31% |
| WAE | 89% |

# CAUSES...

DIVISION OF  
Agricultural Sciences  
& Natural Resources

# EXCELLENT PERFORMANCE

|                    |      |     |     |
|--------------------|------|-----|-----|
| Average catch (in) | 0.18 | CU  | 92% |
| DU                 | 86%  | WAE | 96% |

# ENERGY AUDIT

## Field measurements

(Derrel, et al., 2011)

- Input power (kW-hr for electricity & ft<sup>3</sup>/hr fuel)

### Overall Pumping Efficiency (OPE)

$$OPE = \frac{Q * TDH}{(3960 * HP_{in})} \quad (Kenny, 2013)$$

### Nebraska Pumping Plant Performance Criteria (NPPPC)

| Power Source | Power Unit Efficiency (%) | Overall Efficiency (%) |
|--------------|---------------------------|------------------------|
| Electric     | 88                        | 66                     |
| Diesel       | 33                        | 24                     |
| Natural Gas  | 24                        | 17                     |

(Fipps, 1995)

# ENERGY AUDIT

WATER FLOW (ULTRASONIC METER)

PUMP DISCHARGE PRESSURE  
(PRESSURE GAUGE)

# ENERGY AUDIT

## WATER LEVEL MEASUREMENTS

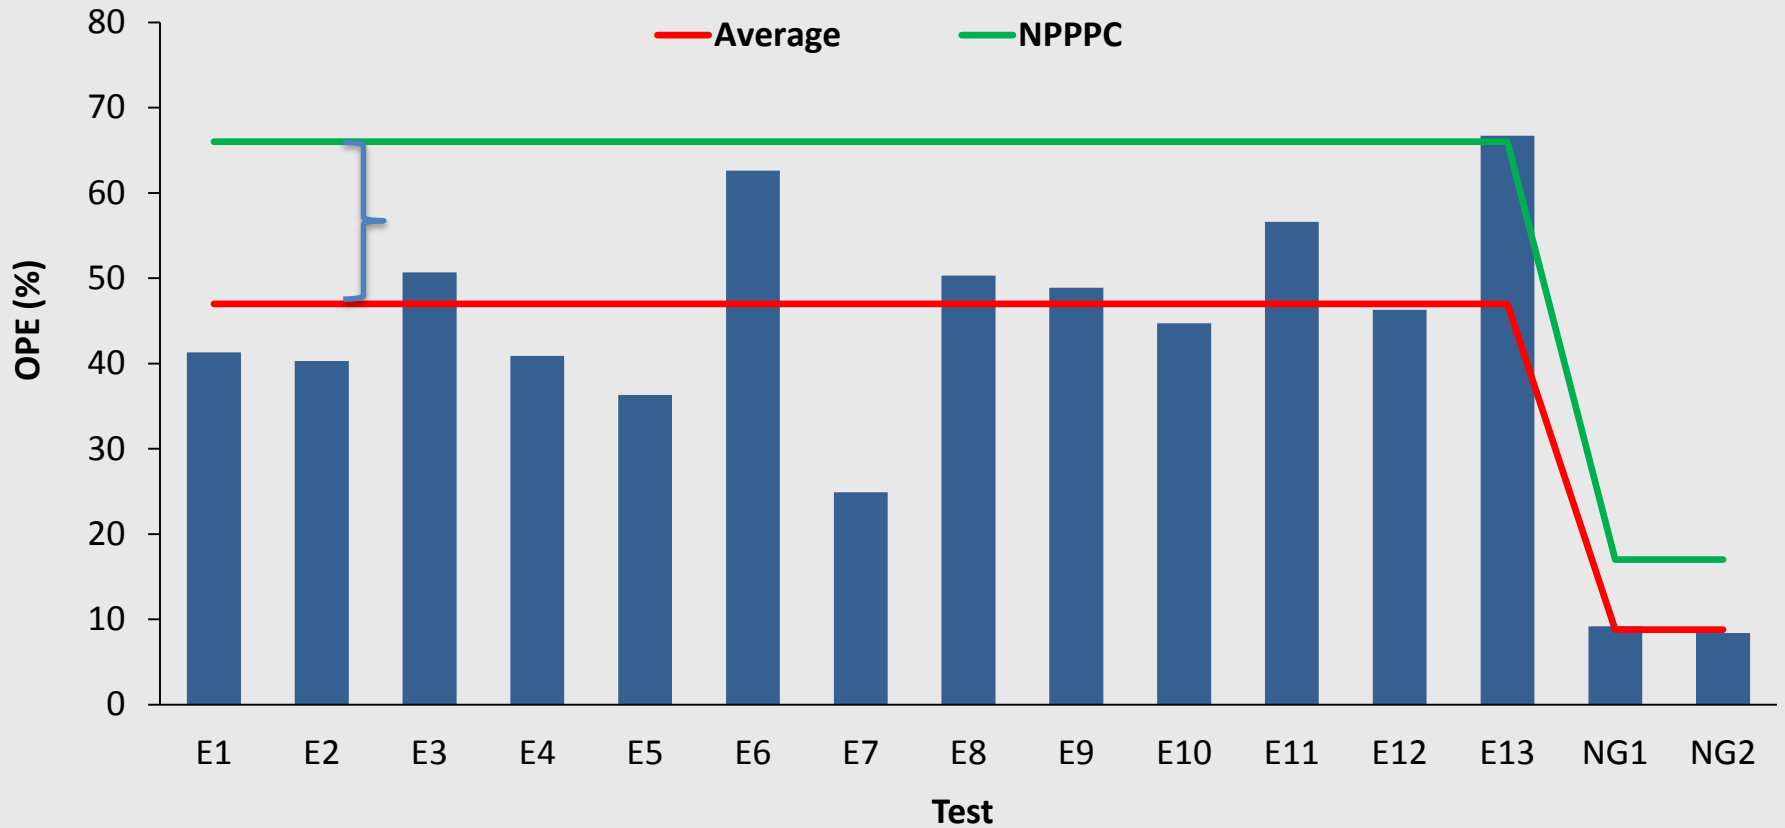

## INPUT POWER MEASUREMENT (ELECTRIC)

DIVISION OF  
Agricultural Sciences  
& Natural Resources

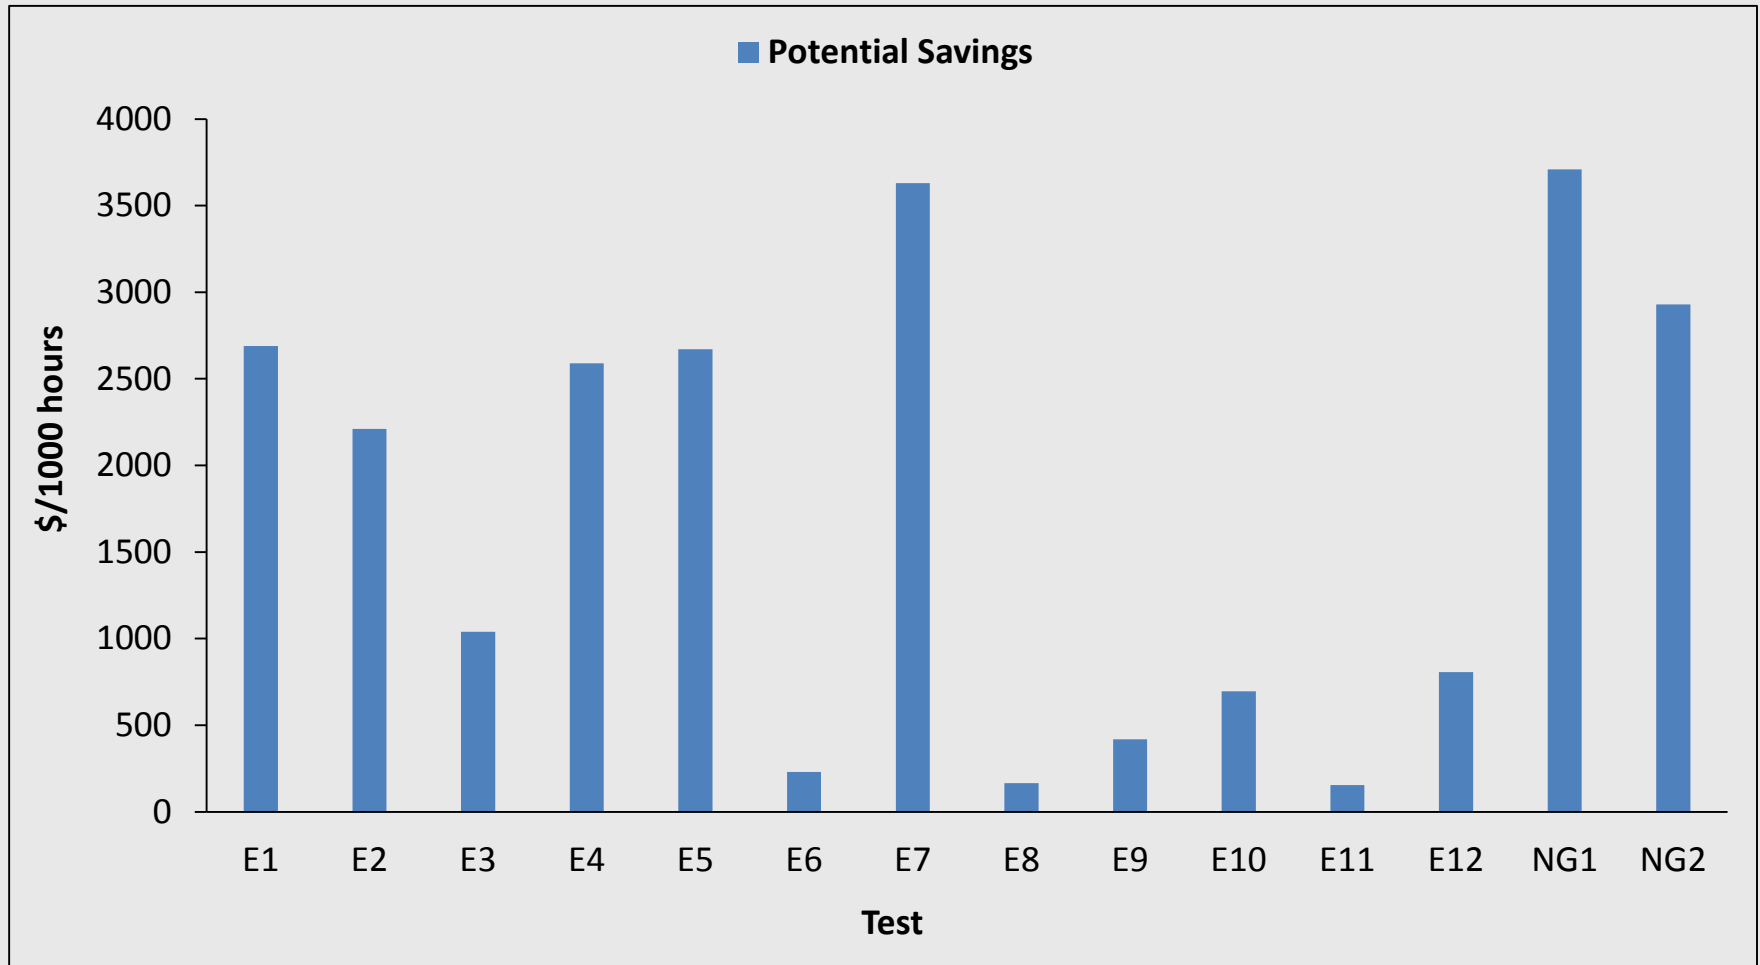

# OVERALL PUMPING EFFICIENCY (OPE)

## OPE COMPARED TO NPPPC ACCEPTABLE VALUES

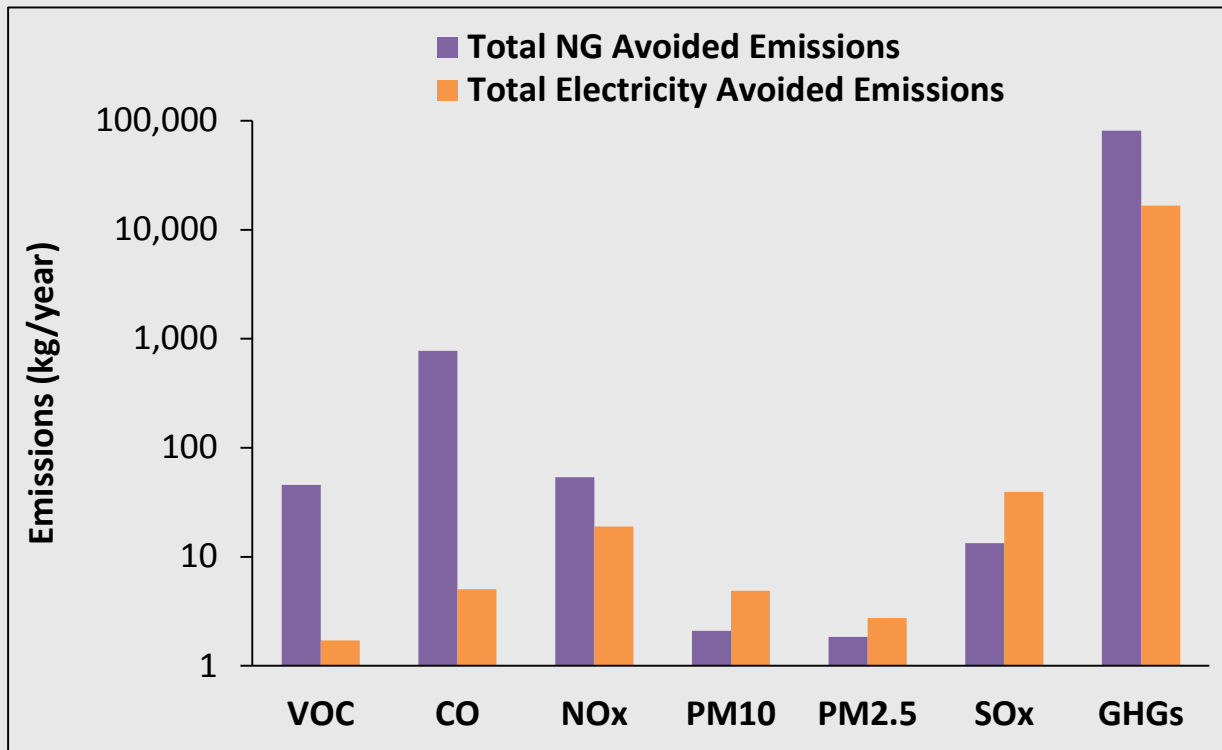

# ENERGY COST ANALYSIS

# LIFE CYCLE ASSESSMENT (LCA)

- Estimate the environmental impacts due to inefficiency
- Based on the NPPPC standards
- GREET v1.3.0.12704 (Argonne National Lab)
- Emissions: Greenhouse gases (GHGs) & Criteria pollutants

## Preliminary LCA analysis results for 8 systems:

- Avoided emissions are negligible at the pumping site for electric powered plants
- Emissions have negative health and environmental impacts
